ULTRASOUND OF THE LEFT NECK

Reported: 21/05/2023

ULTRASOUND OF THE LEFT NECK

HISTORY:

5 year history of slowly growth lump at left mandibular angle. Grew rapidly more in the last 2 years.

FINDINGS:

The parotid, submandibular and thyroid glands are normal. There are multiple enlarged morphologically normal appearing lymph nodes in the anterior chain with the largest measuring 6 x 15 x 18mm.

The palpable region of interest in the submandibular region directly corresponds to isoechoic, non vascular, well defined lesion measuring 18 x 26 x 44mm. This is consistent with a lipoma.

IMPRESSION:

The palpable area corresponds to a left submandibular subcutaneous lipoma.
