Referring Physician	BURMEISTER, LYNN	Modality	US

PELVIC ULTRASOUND

Clinical History:

Infertility baseline

Findings:

Transabdominal and transvaginal ultrasounds performed.

The anteverted uterus measures $79 \times 42 \times 48 \,\mathrm{mm}$ (volume of $86 \,\mathrm{ml}$). The uterine myometrium demonstrates homogeneous echotexture. The endometrial double layer thickness measures $5 \,\mathrm{mm}$. No discrete uterine myometrial lesion detected.

The right ovary measures 9.2ml. There are 15 right ovarian follicles with only single ovarian follicle of 17mm. The remainder of the right ovarian follicles ranging up to 14mm in maximum diameter.

The left ovary measures 6.3ml. There are 18 left ovarian follicles. 16 of left ovarian follicles ranging up to 10mm in maximum diameter.

Two ovarian follicles on the left are just above 10mm in diameter.

No adnexal mass detected.

No free fluid in the pelvis or pouch of Douglas detected.

Opinion:

No adnexal mass detected.

Both ovaries are of normal appearances.

There are single right ovarian follicle and 2 left ovarian follicles above 10mm in diameter.

Radiologist: Dr A. Agahi
