MRI RIGHT THUMB

HISTORY:

? CMC joint arthritis.

FINDINGS:

Non-contrast imaging has been performed.

The CMC joint is normal in appearance with intact chondral surface. No subchondral bone abnormality seen. No joint effusion or synovitis. The anterior oblique ligament and the dorsal ligaments are intact.

MCP joint is normal in appearance with intact collateral ligaments. Flexor and extensor tendons are intact.

COMMENT:

Normal appearances of CMC joint.

Electronically Signed by: Dr Steven Lee
