Physical Assessment (Office ONLY)

Main Observations (Office ONLY)

- thoracic / lumbar
- Finger / thumb overextended
RSI?

Consultation Form - Notes (Office ONLY)

Name: Patrick Bath-Ville Address: 92 Empire Ave, Wembley Downs

11/10 Jan 19

~~11/10 Jan 19~~ - Patrick had lots of back issues due to previous injuries & work. FBM (+) Lumbar + thoracic.

26/11 April 19 - No major back issue today. He started exercising & stretching. Has been having a lot of problems w/ his (R) foot (possible plantar fasciitis) due to his work boot. Suggested to further investigate FBM, w/ focus mkt on leg. Suggested exercises for his foot, strengthening Tibialis Posterior to help w/ foot pain.

Notes

2nd Aug 19 - Patrick is still having some foot issues. PBM massage w/ focus on legs. Lots of T.P.s & discussion of exercises & possible pain relief. ~~As~~ As client had tape available (shapping to his (R) ankle/foot to alleviate pain after treatment) was done. Hopefully he will follow up w/ a doctor to seek proper diagnosis. ~~is recommended.~~

6/9/19 - Client improving re foot (R) injury. He did not follow up w/ his doctor but S&S suggest plantar fasciitis. He has been doing a lot of stretches that have helped him. Treatment today similar to last time, full body but w/ major focus on legs. Reviewed his exercises & suggested only stretches in different positioning. He is also doing homeopathy (from his mom Marion Volk - she's a naturopath).

11/10/19 - Foot (R) significantly better & client resuming gradually to his activities/work. Helping his mom around the house w/ the prep work to sell the house. PBM today w/ focus on legs as usual. Still proceeded w/ upper body work, but focused on legs.

8th Nov 19 - Full body massage: BNS - MFR N/S + MFR legs but much better. Client is planning to return to work soon. Still doing a lot of work around the house but much better. Client felt quite relaxed today.

20/12/19 - comm. C/o lower back & neck pain. He recently helped a friend move houses. R & PBM w/ MPR; T/P H's & top of shoulders. ROM neck was initially & not recovered full range at the end.

Reported: 19 August 2020

Dear Dr Soh

Re: **Mr Patrick Volk - DOB: 25/03/1967**
82 Empire Avenue WEMBLEY 6014

History: Severe pain right ankle. Left heel pain.

CT RIGHT ANKLE

Findings:

The ankle joint space is well preserved.
No evidence of arthritis or loose body.

Mild irregularity to the talar and calcaneal articular surfaces for the posterior facet of subtalar joint. No definite narrowing. Has there been a previous injury?

A large calcaneal spur.
Prominence of the proximal posterior calcaneum.

The midfoot joints appear reasonably preserved.

CT SCAN LEFT HEEL

History: Left heel pain

Findings:

Prominence of the proximal posterior calcaneum suggesting Haglund's deformity.
Mild plantar calcaneal spurting.

The ankle and the subtalar joints appear normal.

Dr Johanna Lagerberg

Patrick is Marion Volk's son.
DOB 28.03.1987

IAx and notes archived before 2019.

11th September 2020 - Took Kim Liddle's place for treatment today. Patrick has injured himself subtalar joint R ankle. He has a Hx of plantar fasciitis and other foot problems. His CT for both ankles are attached to his file. Due to not been able to walk (currently using crutches) his back and upper body are compensating with extra tightness. PA could not be done with him standing and only sitting on top of the massage table. He has full ROM but due to lack of mobility is having trouble sleeping and tension on shoulders and neck. Rx today focused on upper body, arms and neck with intense deep tissue treatment and shoulder mobility. Tension was released but I recommend weekly treatments. Also referred him to Endeavour student clinic so he would get treatments for more affordable prices since he is not working due to his injury. DK
