Dear Katrina and Greg

It was lovely to see you both today following your recent IVF cycle. I was sorry that we did not have success with this cycle. We reviewed the cycle together today and although we obtained good numbers of eggs and good numbers fertilised after a day 3 transfer, unfortunately pregnancy did not result.

We have made some recent dose adjustments to Katrina's Thyroxine and I have recommended that she re-test this at the beginning of November. She is currently taking 150mcg Monday – Thursday and 200mcg, Friday, Saturday and Sunday.

You are keen to proceed with another cycle and we discussed adjustments we would make to your cycle going forward including using an extra injection to try and improve ovarian response. I would recommend that you take CoQ10 pre- treatment and DHEA and I have given Katrina a prescription for that. I would recommend Greg has Menevit to optimise sperm quality.

Unfortunately, at the moment we are quite limited with the cycle numbers we can take here at the clinic, so I do apologise if we are not able to start your cycle at the desired time. We will do our best to facilitate things however in the meantime, I would recommend that you continue the Folic Acid and start the DHEA and CoQ10 to optimise ovarian response and egg quality.

Kind regards

Yours sincerely
