#### ULTRASOUND RIGHT FOREARM

##### Clinical Indications:

Injury/ felt pop while rock climbing on Saturday. Pain over the volar aspect/ flexor side of 4th and 5th digits.

##### Report:

Volar aspect of wrist and forearm is normal.  
Flexor tendons from distal 4/5th phalanges to mid forearm (musculo-tendinous junctions) are normal.  
Pulleys on 3rd, 4th and 5th digits appear normal.

##### Conclusion:

Normal study. No sonographic abnormality noted.

Electronically signed by: Dr Vivek Ramachandran at 9:30 AM Thu, 22 May 2025
