Tweed Heads NSW 2486

Dear Dr Agah

I am a Clinical Naturopath and am currently seeing Paula Steele-Boyce for some health related concerns.

I kindly refer Paula back to you for further investigation for some unpleasant GIT symptoms she is experiencing. Upper digestive fullness, gastroparesis, pain and bloating.

I recommend a NUTRIPATH Microbiomix Metagenomic Mapping (test code 2212) to be carried out, for a comprehensive look at biochemical and microbial markers.

I also think it important to look at liver function. LFT was not included in her last pathology (25/2/25). And maybe even upper gastric investigation (Endoscopy), given her history of H-Pylori infection.

Thank you for your time and professional assistance.

Kindly,

Leigh Jane Gibbs
