Collection Date: 04 Jul 2022

Thyroid Antibodies

Your thyroid antibodies are within the normal range meaning that it is unlikely that autoimmune disease is impacting your thyroid function.

TPOAb < 28 IU/ml

Thyroid peroxidase antibodies work against thyroid peroxidase, an enzyme that plays a part in the T4-to-T3 conversion and synthesis process. TPO antibodies can be evidence of tissue destruction, such as Hashimoto's disease.

TGAb < 1.3 IU/mL

When your immune system attacks the thyroid it often targets thyroglobulin which causes it to produce antithyroglobulin antibodies. Thyroglobulin antibodies are positive in about 60% of Hashimoto's patients and 30% of Graves patients.

Recommendations

Check in with your GP

As always, please visit your GP to discuss your results. Laboratory investigations are an important aspect of healthcare, however they must be viewed in the wider context of your medical history, current health and concerns, physical examination findings and other investigations. These results do not replace the need for face to face medical consultation or regular visits to your local GP. Please contact us if you would like a copy of your lab report.
