

Report

PELVIC ULTRASOUND

Sonographer: DS

INDICATION

Clinical hyperandrogenism (normal biochemistry) and irregular periods. ? PCOS.

TECHNIQUE

Transabdominal and transvaginal ultrasound was obtained.

FINDINGS

Anteverted uterus measuring 60 x 35 x 46mm.

The endometrium is 4mm and unremarkable.

The internal os is closed and the cervical length measures 42mm.

Both ovaries demonstrate multiple follicles of fairly similar size and appearance. The right ovary measures 31 x 18 x 27mm corresponding to 7cc in volume. It has more than 15 follicles, the largest measuring less than 10mm.

The ovaries are mobile and non-tender.

Multiple follicles are seen in the left ovary with more than 15 follicles less than 10mm in size. The left ovary measures 28 x 18 x 30mm corresponding to 8cc in volume. It is non-tender and mobile. No adnexal lesions or free fluid.

IMPRESSION

Multifollicular appearance of both ovaries. Kindly correlate with the biochemical markers and clinically to assess for multifollicular vs polycystic ovaries. Ovarian volumes are less than 10cc bilaterally.

Thank you for referring this patient
