Name of Test: S- CA19.9  
Requested: 09/05/2022 Collected: 09/05/2022 Reported: 10/05/2022  
06:32

**Clinical notes:** Clinical notes available on imaged request form.

Clinical Notes : Clinical notes available on imaged request form.

**Cancer Antigen 19.9 (CA19.9)**

CA 19.9 (Cobas) <5 U/mL ( <34 )

Comments on Collection 667165311

CA19.9 levels are elevated in about 70% of patients with carcinoma of pancreas and bile ducts, stomach (60%), large bowel (40%) and ovary (30%). Levels may also be elevated in some other malignancies and some non-malignant disorders.

Since the CA19.9 antigen is related to the Lewis blood antigen, individuals who are Lewis a-b- (about 5% of Caucasians) cannot produce the CA 19.9 antigen.

CA19.9 is essentially unaffected by renal impairment.

Roche Cobas Elecsys is used to perform the CA19.9 assay.

High dose biotin (Vitamin B7) can interfere in the CA19-9 assay, causing a falsely decreased result. High dose biotin may be used in the treatment of Multiple Sclerosis, and is present in certain vitamin supplements, particularly those for hair and nails. If the patient is taking high dose biotin supplementation (>5 mg/day) this result may not be accurate, please repeat this test after at least 3 days off biotin

EA
