24/08/22				71	88426244

Ref: (30 - 200)

88426244 Low-normal ferritin may indicate adequate iron stores but iron deficiency cannot be excluded as some cases may have falsely raised ferritin by acute phase response or inflammation. Correlate with clinical state.

Iron Studies Update 29/03/2016

The ferritin reference range has been updated with adult lower limits of 30 now for all. The reports have also been updated to take account of the following:

- As ferritin is influenced by acute phase responses results in the lower-normal range (30-100) may not exclude iron deficiency.
- Ferritin levels >100 and < upper limit usually reflect adequate iron stores.
- Serum iron is useless in determining tissue iron stores.
