CT LUMBAR SPINE 27/10/2021 Reference: 5863863  
Site: Gawler ID: BR-JBD772Y

CT LUMBAR SPINE

**Clinical:**

Five weeks right lumbar pain. Slow to improve. On weekend right lumbar pain with radiation to right calf. Exclude structural abnormality.

**Findings:**

No comparison imaging.

The lower four lumbar discs have been covered.

A large right medial foraminal disc extrusion L5-S1 level compresses the pre-emergent right S1 nerve root. The herniated disc size is in the order of 7 x 11 x 9mm.

At L4-5 there is mild laxity of the disc but there is no further significant herniation or stenosis.

Facet degenerative change is minimal.

No endplate fracture or suspicious bony lesion seen.

Radiologist: Dr D. Allison
