GYNAEPATH HISTOPATHOLOGY REPORT : 32017-20MP

CLINICAL NOTES:

Endometriosis. Areas of peritoneum. Uterine curettings.

MACROSCOPIC:

- 'Uterine curettings'. The specimen consists of a moderate amount of tissue fragments. All embedded. (1 block)
- 'Right uterosacral ligament'. The specimen consists of a piece of soft tissue measuring 13x12x2mm. Trisected and all embedded. (1 block)
- 'Left uterosacral ligament'. The specimen consists of a piece of soft tissue measuring 43x13x2mm. All embedded. (1 block)
- 'Pouch of Douglas'. The specimen consists of multiple pieces of soft tissue measuring 18x17x5mm in aggregate. All embedded (1 block). KT13

MICROSCOPIC:

- Sections show a moderate amount of proliferative endometrium. Fragments of squamous and endocervical-type glandular tissue are also present. No chronic endometritis, polyps, complex atypical hyperplasia or evidence of malignancy is seen.
- 2-4. These specimens are described together. Sections show mesothelial-lined fibromuscular and fatty tissue with features of endometriosis. There is no evidence of malignancy.

DIAGNOSIS:

- UTERINE CURETTINGS** - **PROLIFERATIVE ENDOMETRIUM**
- 2-4. RIGHT UTEROSACRAL LIGAMENT, LEFT UTEROSACRAL LIGAMENT AND POUCH OF DOUGLAS** - **ENDOMETRIOSIS**

Dear Gaye

RE: Mrs Jordana Thirlwall DOB: 30/03/1982
26 Warringah Street NORTH BALGOWLAH NSW 2093
Mobile: 0417 541 720

I did a hysteroscopy and D&C and insertion of Mirena and laparoscopy for Jordana. There was a 9cm uterine cavity. Laparoscopy revealed unusual adhesions under the left ovary and these were all divided. She had endometriosis on both pelvic side walls and the Pouch of Douglas and all the areas were excised. There was some unusual scarring on the left side of the uterovesical fold but I am sure this was related to a previous caesarean. I will see Jordana in follow-up.

Many thanks for referring her.

With best wishes

Yours sincerely

HUGH TORODE
