					68	nmol/L	(50-140)

Comment on Lab ID 266926169

According to the Position Statement 'Vitamin D and health in adults in Australia and New Zealand' MJA, 196(11):686-687, 2012, Vitamin D status is defined as:

Mild Deficiency	30 - 49 nmol/L
Moderate Deficiency	12.5 - 29 nmol/L
Severe Deficiency	< 12.5 nmol/L

Vitamin D adequacy can be defined as a level > 49 nmol/L at the end of winter - the level may need to be 10 - 20 nmol/L higher at the end of summer, to allow for seasonal decrease.
From 1st November 2014, Medicare rebates for vitamin D testing will apply to patients at risk of Vitamin D deficiency such as chronic lack of sun exposure.

Thyroid Autoantibodies

Thyroglobulin Ab	2.5	IU/mL	(< 4.1)
Thyroid Peroxidase Ab	* 10.0	IU/mL	(< 5.6)

Comment

Elevated levels of thyroid peroxidase antibodies occur in Hashimoto's disease, other thyroid disorders and in clinically normal persons.
From 06/09/17, Thyroid antibodies will be measured by the Abbott Architect (not Immulite) method and reported with new reference intervals.
