Blood Bank Serology

Blood Group O Rh(D) Positive

Antibody Screen Negative

Comment on Lab ID 849247471

ANZSBT Antenatal guidelines recommend that all Rh(D) negative women should have red cell antibody screening performed at their initial antenatal visit and at least once between 28 and 36 weeks gestation. In the context of routine antenatal prophylaxis, this should be undertaken prior to the administration of the first dose of RhD immunoglobulin, at 28 weeks. However additional testing is appropriate when there is a history of significant antibodies,
