Comment on Lab ID 850505305

Group B streptococci are frequent commensals of the gastrointestinal and female genital tract. Colonisation only becomes significant in pregnancy due to the association with puerperal and neonatal sepsis. If antibiotic treatment of Group B streptococcus is clinically indicated, appropriate empiric choices include penicillin/amoxicillin, cephalexin, and vancomycin. If susceptibility testing is required for additional antibiotics, please advise the laboratory (9855 5429) within 7 days of specimen collection.
