TSH is within reference limits.

Please note that if 'Thyroid function tests' or 'TFTs' are requested as a simple screening test, a TSH level is always done first. If this is increased a T4 level will be done automatically. If this is decreased a T4 and T3 will be performed automatically.

Streptococcal Serology

Anti-Streptolysin O (ASO)	68	IU/mL	(	<178	)
Anti DNASE B	<100	U/mL	(	<391	)

Comment on Lab ID 861443506

Streptococcal serology is not recommended for investigation of acute sore throat. It may assist in the diagnosis of non-suppurative post-streptococcal sequelae eg acute rheumatic fever and post-streptococcal glomerulonephritis.

ASO titre tends to rise a week following infection, peaking at 3-5 weeks and declines after 8 weeks and responds to pharyngeal infection more vigorously than skin infection. Anti-DNaseB titre rises more slowly and peaks at 6-8 weeks and declines after 12 weeks but responds equally strongly to both pharyngeal and skin infections.

Please note reference intervals for both ASOT and DNase have been updated from 03/01/2017.
