

Good morning Sandy

As discussed please see list below of Will's injuries from a major motor vehicle accident in 2017:

- base of skull fracture
- fractures of sinuses
- type B aortic intimal tear
- bilateral pulmonary contusions
- multiple right sided rib fractures with a flail segment and haemopneumothorax
- grade 2 liver laceration/injury with a subcapsular haematoma
- pneumoperitoneum
- right acetabular transverse fracture
- sacral U fracture with vertebropelvic dissociation with overlying lumbar Morel Lavallee lesion
- left transverse process fractures involving T11, T12, L1, L2
- undisplaced transverse fracture of the right L3
- undisplaced fractures involving the lamina and spinous process of L4
- L5/S1 radiculopathy on left secondary to traumatic injury
- bilateral transverse process fractures, as well as undisplaced spinous process fracture of L5
- mildly displaced fracture involving the right glenohumeral head
- mildly displaced right scapular fracture
- right elbow dislocation
- urethral stricture
- below-knee DVT on left

As a result of these injuries Will has had the following procedures:

- thoracic endovascular aortic repair for aortic transection 23/5/17
- cystourethrogram. flexible cystoscopy and insertion of IDC and SPC 23/6/17
- open reduction internal fixation of right acetabulum, SI joint screws bilaterally, and exploration under anaesthesia of right elbow

I have copies of his scans and x-rays on a disc at home. Please let me know if you need to see these and I will find someone with a laptop with disc reader to get them to you.

Thanks  
Sarah
