XR KNEE RIGHT

Ordered: 10/11/2022 **Performed:** 10/11/2022 **Reported:** Thursday, 10 November 2022 18:01:10

Dear Dr Ebsworthy

X-RAY - RIGHT KNEE

CLINICAL INDICATIONS:

? Osteoarthritis. Prior meniscal injury.

FINDINGS:

Reference is made to the previous x-ray done on 18/02/2021.

Significant degenerative osteoarthritis characterised by tibial spine hypertrophy and knee joint osteophytes.

Moderate-severe lateral tibiofemoral joint space narrowing with subchondral sclerosis.

Medial tibiofemoral joint space is maintained.

Prominent osteophytes at the medial patellofemoral joint.

Patellofemoral joint space is otherwise maintained.

No visualised radiopaque intra-articular loose body.

No significant joint effusion.

Findings are stable from previous.

Yours Sincerely,

Dr Jonathan Waner
MBBCh, FRANZCR
