Comments on Collection 02/11/22 1613:

Thyroglobulin autoantibodies present in this patient's serum may falsely decrease the measured thyroglobulin so that the true level may be higher. Please note that from 27/01/2022, Thyroglobulin measurement changed from the Siemens Immulite to the Abbott Architect method.

Please also note that:

- the upper reference limit has changed to <65 ug/L.
- the new assay is more sensitive with a lower limit of reporting of <0.1 ug/L (Abbott method) compared to <0.9 ug/L (Siemens method).
- measured values with the Abbott method are approximately 70% of those using the Immulite method on the same serum specimen so that results obtained using the two methods are not directly comparable.
