**X-Ray Cervical Spine, X-Ray Lumbosacral Spine, X-Ray Pelvis, X-Ray Thoracic Spine**

Dear Sultana,

Thank you for referring Kaylene Thomas.

**HISTORY:**

Chronic lumbar and pelvic pain. Chronic headaches.

**FINDINGS:**

Cervical alignment is normal. Cervical disc spaces are preserved. Facet joint degenerative changes are seen maximal at C3/4 on the left and C4/5 on the right. There are some small posterior osteophytes at C5/6. Some anterior spondylosis is seen at C6/7.

There is a very gentle scoliosis convex to the left within the thoracic spine. Thoracic alignment is otherwise normal. Some very minor osteophytic lipping is seen within the mid thoracic spine.

There is a gentle scoliosis convex to the right within the lumbar spine. Lumbar alignment is otherwise normal. Some facet joint degenerative changes are seen at L5/S1 and to a lesser extent L4/5.

There is mild pelvic tilt with the left iliac crest higher than the right.

Subchondral cysts are seen within the acetabulum bilaterally larger on the right. The bony hip joint spaces are preserved. There is no other evidence of an arthropathy. Sacroiliac joints and symphysis pubis appear normal.

With kind regards,

Dr James Mullins
