X-RAY LUMBAR SPINE

Clinical Details:

Lower back pain L2-L4. Cause?

Findings:

Five lumbar-type vertebral bodies. Alignment maintained. Congenital unfused neural arch of L5 similar to x-ray 28/9/2018. Pedicles intact. No vertebral body compression fracture. Mild narrowing of the intervertebral disc space at L2/3 with endplate sclerosis of L3 superiorly. Mild narrowing of the intervertebral disc space at L5/S1. Sclerosis over the facet joints from L2-S1 is also similar to prior. Transverse processes appear maintained. SI joints normal.
