Please note that the above reference limits are decision limits.
A flag based on these limits is an indication to review the absolute
cardiovascular risk for the patient. For assessment of absolute
cardiovascular disease risk please see www.cvdcheck.org.au

The above decision limits are based on the European Atherosclerosis Society
(EAS) and European Federation of Clinical Chemistry and Laboratory Medicine
(EFLM) Consensus Statement 2016 and the Australasian Association of
Clinical Biochemistry and Laboratory Medicine (AACB) Lipid Reporting
Guideline 2018.

Lipid treatment targets for patients at high risk of cardiovascular
disease:

Total cholesterol	<4.0 mmol/L	
Triglyceride	<2.0 mmol/L	
HDL cholesterol	>1.0 mmol/L	
LDL cholesterol	<2.5 mmol/L (<1.8 mmol/L for very high risk)
Non-HDL cholesterol	<3.3 mmol/L (<2.5 mmol/L for very high risk)

High risk - Primary prevention   Very high risk - Secondary prevention

Target values from the AACB Lipid Reporting Guideline 2018.

Please note that as there is a continuum of risk, benefits are obtained for
any measured lipid components moving towards and beyond the various target
levels.
