Clinical Notes : EDD: 12.08.23

Glucose Challenge

Glucose load	50	g	
Time post load	60	Minutes	
Plasma Glucose	9.9 H	mmol/L	(3.6 - 7.8) #

#Please note reference limits apply to Pregnancy at the specified date of collection.
Comment on Lab ID 887079285

In pregnancy, a glucose >7.8 mmol/L (post 50g load) indicates that a full oral GTT should be performed.

Please note that a glucose challenge test is no longer recommended as an initial step in the assessment of patients for gestational diabetes. The Australasian Diabetes in Pregnancy Society (ADIPS) and the Royal Australian and New Zealand College of Obstetricians and Gynaecologists (RANZCOG) currently recommend that all women undergo a 2 hour glucose tolerance test with 75 gram load (POGTT) for the routine assessment of hyperglycaemia in pregnancy.

NATA Accreditation No 2178
