Clinical Information:

Bacterial Serology (serum)

H. pylori IgG Ab Negative

Helicobacter pylori Comment

No serological evidence of infection with Helicobacter pylori, however if a very recent infection is suspected, please collect a convalescent specimen at least 14 days after onset of symptoms. IgG antibodies to H.pylori cannot distinguish current from past infection. Non-invasive tests for active H.pylori infection include the urea breath test and/or stool antigen test.
