COELIAC DISEASE SEROLOGY

Gliadin IgG (deamidated peptide)	Not Detected
TTG IgA (human recombinant)	Not Detected

Negative serology makes the diagnosis of untreated coeliac disease unlikely provided the patient is on a gluten containing diet.

If a strong clinical suspicion exists, genetic testing for coeliac disease (HLA DQ2/DQ8) should be considered. A negative result for DQ2/DQ8 makes the diagnosis of coeliac disease highly unlikely. A small bowel biopsy may be required in the event of a positive DQ2/DQ8 result.

Patients should contact their referring doctor in regard to this result.
