Titre = 1/160 has possible clinical significance
Titre $\geq$ 1/320 is likely to be clinically significant

A positive ANA is significant ONLY in the presence of clinically relevant symptoms. A high titre ANA can be present in normal individuals, particularly in women and with increasing age.

Speckled staining pattern present. This may be associated with chronic inflammatory and/or autoimmune diseases.

Serum Anti DNA Antibodies
ds-DNA Ab. <10 IU/mL [0-99]

DNA antibodies are frequently negative in SLE and their absence does not exclude this diagnosis. If markedly elevated indicative of active SLE. A change in titre may be related to a change in disease activity.

Assays to detect dsDNA antibodies vary markedly in their performance characteristics. At an extreme, positive results in one assay can be negative in another. Thus, reliable serial measurements of dsDNA should be undertaken with the same assay.
