CUMULATIVE VITAMIN B12 AND FOLATE ASSAYS
Date 19/11/21
Time 08:05
Lab No 67785098

Active B12 > 146 pmol/L (> 40)
S.Fol. 39.7 nmol/L (8.4-55.0)

Comment:
67785098

Serum Folate Assay:
Adequate Serum Folate.
In the absence of recent oral intake, a serum folate >13 nmol/L effectively rules out folate deficiency. Consider repeat fasting Folate, if there has been inadequate fasting, and clinical concern remains.

Holo TC Assay:
No suggestion of vitamin B12 deficiency.
High B12 levels are commonly seen with vitamin B12 replacement therapy.

Methodology:
B12 and Active B12 (HoloTC) assays performed on Siemens Atellica analyser.

For Doctor clinical enquiries, please contact Dr Peter Davidson 07 3121 4444.
Patients should contact their referring doctor in regard to this result.

Due to a change in Active B12 methodology the reference interval has been adjusted and results from 26/7/2021 will be a little higher than those from previous tests.
We have adjusted the interpretation criteria to take this into account.

Thyroglobulin AbII			< 1.3	IU/mL (< 4.6)
Thy. Peroxidase Ab		40	39	IU/mL (< 60)

Low TSH although the free T4 is not overtly elevated.

This may be associated with:

- . Thyroxine therapy
- . Drugs e.g. Lasix, anticonvulsants, steroids
- . Intercurrent illness, "Sick Euthyroid" state
- . Hypopituitarism (rare)

These antibody levels are not suggestive of Thyroid inflammatory or rapidly progressing neoplasia. However 15% of Hashimoto's does not produce measurable antibodies. Prior autoimmune activity cannot be excluded.

Please note that as of 06/9/2021, QML Pathology changed to a reformulated Atellica Thyroglobulin Antibody (TgAbII) assay. The reference interval has been updated. Differences in individual patient results may be observed compared to the previous method. If further information is required please contact a Chemical Pathologist on (07) 3121 4444.

in SI units	28	30 mmol/mol

Note: Caution is needed in interpreting HbA1c results in the presence of conditions affecting red blood cell survival times, which may lead to either falsely high or falsely low HbA1c results.

HbA1c diagnostic levels - RCPA 2014

- < 6.1% (<43 mmol/mol) - current diabetes is excluded
- 6.1-6.4% (43-47 mmol/mol) - high risk for future diabetes
- > 6.4% (>48 mmol/mol) - diabetes is likely

Unless patient has supportive symptoms or elevated plasma glucose values, repeat test is recommended.

Currently, Medicare will fund only one diagnostic test per year.

Sample may be collected at any time - fasting is not required.

Note - diabetes tolerance may be impaired by chronic illness, use of certain drugs including steroids, Cushing syndrome, etc. We would advise considering secondary forms in newly-diagnosed patients.

 Low TSH with normal FT4 & FT3 are suggestive of subclinical hyperthyroidism. Suggest repeat the assay in 2-3 months time. Other possible causes of low TSH include non-thyroidal illness and medications.
 Please assess clinically.
