ANTI-MULLERIAN HORMONE

Date	08/11/20	02/03/23		
Time F-Fast	1024 F	1155		
Lab Id.	363769795	378665557	Units	Reference
S AMH	35	34	pmol/L	(1-44)

Comments on Collection 02/03/23 1155:
AMH

The reference interval quoted above for the Roche AMH Plus assay is the age-related 2.5 - 97.5 percentiles.

Generally accepted fertility criteria (not age-related):
<11.0 pmol/L: Suggestive of reduced ovarian reserve
>24.0 pmol/L: Indicates the possibility of
1. Polycystic Ovarian Syndrome
2. In post-menopausal females - granulosa cell tumour
3. Increased risk of Ovarian Hyperstimulation Syndrome in a stimulated cycle

AMH is produced by the granulosa cells of developing follicles, and provides an estimate of the number of primordial follicles. Particularly in younger women, a low AMH level does not exclude the possibility of fertility.

Levels may be decreased in the latter part of the menstrual cycle and by the OC pill.
High dose biotin (Vitamin B7) can interfere in the AMH Plus assay, causing a falsely low result. High dose biotin may be used in the treatment of Multiple Sclerosis, and is present in certain vitamin supplements, particularly those for hair and nails. If the patient is on high dose biotin (>5 mg/day) please contact Dr Ken Sikaris on 9287 7720.

S FT4(Roche)				16.7	pmol/L	(11.0-22.0)
S FT3(Roche)				4.6	pmol/L	(3.1-6.4)

Comments on Collection 02/03/23 1155:

ROCHEfT4

High dose biotin can interfere with the Roche FT4 and FT3 methods and cause falsely elevated results. High dose biotin may be prescribed for the treatment of Multiple Sclerosis, and may also be found in certain "Hair, Skin and Nail" vitamin supplements. Standard multivitamins contain low levels of biotin and do not cause interference with Roche methods.

Comments on Collection 02/03/23 1155:

HOLO-TC

This HoloTC (Holo-transcobalamin) is in the low-normal range.

Vitamin B12 deficiency cannot be completely excluded.

Please note: The HoloTC (Holo-transcobalamin) method has changed from Abbott (Active B12) to Roche, effective 01/12/2020. The Roche method is up to 15 pmol/L higher. The reference limits have been changed accordingly.

High dose biotin (>5 mg/day) may artefactually decrease the HoloTC result obtained by this method. If the patient is taking 5-20 mg/day of biotin, suggest withhold for at least 8 hours before blood test (if taking 300 mg/day, withhold for at least 72 hours).

For clinical enquiries please contact Chemical Pathologist Dr Ken Sikaris on 9287 7720.

Requested: 29/03/2023 **Collected:** 05/04/2023 **Reported:** 05/04/2023 17:45

DIABETES DIAGNOSIS & MONITORING

Date	09/01/20	05/04/23		
Time	1404	1006		
Lab Id.	358047161	378722738	Units	Reference
HbA1C	5.1	5.3	%	(4.4-5.6)
HbA1c (IFCC)	32	34	mmol/mol	(25-38)
eAG	5.5	5.9	mmol/L	

Comments on Collection 05/04/23 1006:

HbA1c is Medicare rebateable, once per year, for diagnosis of diabetes mellitus in high risk people. The diagnostic cut-off is HbA1c >=6.5% (48 mmol/mol) in patients with normal red cell turnover.
 For clinical enquiries, please contact Chemical Pathologists

Dr Ken Sikaris / Dr Andrew Carter on 9287 7720.

From 19/01/2021 Melbourne Pathology will be using capillary electrophoresis to measure HbA1c. The results are directly comparable to our previous results measured by HPLC but are more precise, and more accurate, in the presence of many haemoglobin variants.

S FT3(Roche)	3.9	pmol/L	(3.1-6.4)

Comments on Collection 05/04/23 1006:

ROCHEft4

High dose biotin can interfere with the Roche FT4 and FT3 methods and cause falsely elevated results. High dose biotin may be prescribed for the treatment of Multiple Sclerosis, and may also be found in certain "Hair, Skin and Nail" vitamin supplements. Standard multivitamins contain low levels of biotin and do not cause interference with Roche methods.
