MRI RIGHT SHOULDER

Clinical History:

Lipoma, right scapula. Greater than 5cm.

Technique:

Pre- and post-intravenous contrast-enhanced multisequence MRI performed through the right scapular region.

Report:

A well-defined lobulated deep subcutaneous lesion posterior to the right scapula is demonstrated measuring up to 5.3 x 3 x 4.8cm (ML x AP x CC).

This

demonstrates elevated T1-weighted signal, homogeneous fat saturation and several small internal vessels. No nodularity. No deep extension or intramuscular involvement.

COMMENT:

Simple-appearing lipomatous lesion of the deep subcutaneous tissues posterior to the right scapula measuring up to 5.3cm. Specialist/tumour service review remains recommended given its size.

Thank you for referring this patient.

Kind Regards,

Electronically Signed by:
