re. Mrs Doreen Cranston
22 McCauley Crescent
Glenbrook. 2773
D.O.B: 06/06/1961
Tel: 0414849385

Dear David,

Thank you for seeing Mrs Doreen Cranston aged 62 yrs for an opinion and management for her left ankle pain which she has had for many years and X-ray and U/S could not find anything which caused her pain. Her Left ankle jerk seems slightly reduced than that the right. I am not sure it is physiological or pathological. She denies weak or numb of her left ankle, but feels left ankle does not move properly and stiff. Doreen has osteoporosis and L2 fracture (24% loss of the height) for which she was hesitating to start the Prolia and will do the Prolia soon. Please find the enclosed the test results. All her blood test showed she has no autoimmune disease or inflammation caused her ankle pain.

Her current medications are:

Diazepam 2mg Tablet

1/2 Daily if required, for rescue therapy of severe panic attack.
use sparingly.

Ovestin Vaginal 1mg/g Cream
Prolia 60mg/mL Injection

1 Application Before bed twice /week.
1 Injection Immediately Every 6 months.

Allergies:

Penicillin	lumps all over, Severe
any A/Bs	Nausea

Past Medical History:

	Osteoporosis
31/12/2020	Ear sore
17/02/2022	Dermatitis
15/03/2022	Insect bite
27/05/2022	Vaginitis, atrophic
01/12/2022	Nausea

She is worried about SE of any medication

Yours faithfully,

Dr Wei Lu
