CUMULATIVE GLYCATED HAEMOGLOBIN			
Date	21/12/21	05/10/22	17/03/23
Time	09:18	07:47	07:23
Lab No	68794050	71044320	72521562
HbA1c Fraction	5.4	5.4	5.3 %
in SI units	35	35	35 mmol/mol

Note: Caution is needed in interpreting HbA1c results in the presence of conditions affecting red blood cell survival times, which may lead to either falsely high or falsely low HbA1c results.

HbA1c diagnostic levels - RCPA 2014

- < 6.1% (<43 mmol/mol) - current diabetes is excluded
- 6.1-6.4% (43-47 mmol/mol) - high risk for future diabetes
- > 6.4% (>48 mmol/mol) - diabetes is likely

Unless patient has supportive symptoms or elevated plasma glucose values, repeat test is recommended.
 Currently, Medicare will fund only one diagnostic test per year.

Sample may be collected at any time - fasting is not required.
 Note - diabetes tolerance may be impaired by chronic illness, use of certain drugs including steroids, Cushing syndrome, etc.
 We would advise considering secondary forms in newly-diagnosed patients.

For clinical enquiries, please contact Dr Appleton, Chang or Marshall

Tests Completed: TSH, SERUM FERRITIN, FBC, SERUM FOLATE, SERUM VITAMIN B12, SE E.
 Tests Completed: SE HDL, BL HBA1C
 Tests Pending :
