Dear Dr WINES,

Re: Mrs Carly Donovan - Folio No: 88.374068
DOB: 13/02/1974

CT KUB

Clinical History:
? stone burden.

Technique:
Without intravenous contrast (supine).

Findings:
No relevant prior imaging available for comparison.

There are multiple bilateral non-obstructing renal calculi, more numerous on the left. The largest calculus measures 5mm at the left upper pole.

There is a prominent right extrarenal pelvis. No hydronephrosis or ureteric dilatation on either side.

No ureteric or bladder calculus is detected.

Limited evaluation of the abdominal viscera on this non-contrast study. Allowing for this, unremarkable appearance of the liver, gallbladder, pancreas, spleen and adrenal glands. Somewhat appearance of the retroverted uterus. Assessment is limited on CT and this could be further evaluated with ultrasound as clinically indicated.

No bowel obstruction. The appendix appears normal.

No size significant abdominopelvic lymphadenopathy.

North Shore Private Hospital - 3 Westbourne Street, St Leonards NSW 2065

North Shore Health Hub - 7 Westbourne Street, St Leonards NSW 2065

100 Longueville Road, Lane Cove NSW 2066

Tel: (02) 9170 4500 Fax: (02) 9170 4577 contact@nsmm.com.au www.northshoreradiology.com.au

The lung bases are well-aerated.

No destructive bone lesion.

CONCLUSION:

Bilateral non-obstructing renal calculi. The stone burden is greater on the left. No ureteric or bladder calculus is seen.
