Dear Cheung

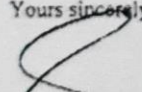

Re: Mr Benjamin WALLER D.O.B: 16/11/1996  
172 NEVILLE STREET SMITHFIELD NSW 2164 File No: 15781

This gentleman is getting better, although he still has minor chest pains and he still feels lethargic.

On examination, the blood pressure was 124/71, with no postural drop, chest was clear and heart sounds were dual. The pulse was 81/min, sinus rhythm. All peripheral pulses were present. The JVP was down, carotids were clear and there was no pedal oedema. Abdominal and central nervous systems were normal. There were no localized areas of tenderness over the chest wall. Resting ECG showed sinus rhythm a rate of 81 per minute with incomplete right bundle branch block. Stress testing was performed on the treadmill using the Bruce protocol. He exercised up to the beginning of stage IV, achieving a maximum heart rate of 168 which was 89% of the predicted maximum, with a peak blood pressure of 175/63. He achieved 10.1 METs. He stopped because of leg pain and shortness of breath. He had minor chest discomfort at peak exercise, but with no ECG changes. There were no arrhythmias induced. Recovery was normal. This was a negative stress test for myocardial ischaemia while on medication.

This gentleman is definitely getting better and I am happy for him to continue current therapy. With your permission, I would like to see him in four weeks' time for a progress echocardiogram.

Yours sincerely,

  
Aggrey Kiyangi
