Comments on Collection 05-Jun-23 0717 F:
Elevated TSH indicates that treatment may have to be increased. TSH can
take up to six weeks to equilibrate with a new replacement dose regime.

→ Thyroglobulin Ab	194 H	343 H	288.6 H	443.8 H	(<4.1) IU/mL

Comments on Collection 05-Jun-23 0717 F:
 Thyroid Antibodies: Levels up to 100 IU/mL can occur in normal subjects (5% of males, 15% of females - mainly elderly) and may also occur in non-thyroid autoimmune and chromosomal disorders.

Raised levels may occur in prodromal hypothyroidism before TSH elevations occur and may also be seen in thyrotoxicosis, thyroiditis, non-toxic goitre and thyroid cancer. The levels seen in Graves' Disease and Hashimoto's can vary from normal up to >1000 , but are usually elevated.

From the 30th of August 2022 reference intervals and results have been modified to one decimal place for Thyroid Thyroglobulin and Peroxidase antibodies.
