Dear Chris,

Thank you for seeing Angela Argyrou aged 49 yrs for opinion and management. She has had recurrent symptoms which raise suspicion of recurrent my/pericarditis possibly relating to a covid Vaccination 2022. Her history summarised briefly is as follows.

Pericarditis and myocarditis 2022 post 3 pfizer covid vaccine.
Confirmed on MRI
Had colchicine and Prednisolone for 6 weeks.
had recurrent episodes of Chest pain, needing steroids for 1-2 days
ongoing issues- with heart racing. Tried different Beta blockers
Now stabilised on Bicar 2.5 mg OD
Out of breath on ordinary activity and heart rate jumps.
Can't exercise, previously to run few Kms.
Constant fatigue
Also seeing immunologist and Haematologist.
Insomnia, Dizziness, abdo pain
Having gastric discomfort - last 3 weeks- gastritis on endoscope. Waking up every hour, extreme nausea, excruciating pain
Worsening chest pressure
high Lymphocytes and IgG4 levels are high- seeing Haematologist

Actions:

Her current medications are:

Circadin 2mg Prolonged release tablet
Hydroxychloroquine 200mg Tablet
Ivabradine 5mg Tablet
Naltrexone 1.5 mg Capsule

| Doxycycline | GI upset, Moderate |
| Sulfur | Anaphylaxis, Severe |
| Xifaxan | Anaphylaxis, Severe |

Past Medical History:

2021 GORD
Thyroid hormone resistance syndrome

TSH always mildly raised
previously was commenced on Thyroxine in
2021 and this made her tachycardic
Saw Endocrinologist Dr Brian Fredericks who
diagnosed her with

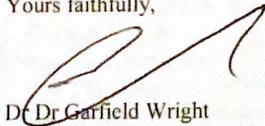

Resistance to thyroid hormone (RTH) is a
heritable defect in thyroid hormone sensitivity,
usually caused by defects in one of the two the
thyroid hormone receptors (TRs). It is
characterized by tissue responsiveness to thyroid
hormone that does not reflect the circulating
thyroid hormone levels.

2022 Pericarditis

booster covid-19 on 14th of January

Past Medical History (Inactive):
Not recorded.

Yours faithfully,

Dr Garfield Wright
