RENAL ARTERY DOPPLER

Clinical Indication:
Refractory hypertension.

Findings:

The right kidney measures 10.5 cm, the left 10.9 cm in bipolar length. There is preservation of renal cortical thickness and echotexture with no focal renal lesions and no hydronephrosis. Corticomedullary differentiation is preserved.

There are normal peak systolic velocities in the main renal arteries. There are normal acceleration times and resistive indices. There is no direct nor indirect evidence of renal arterial stenosis.
