RHEUMATOID SEROLOGY

Rheumatoid Factor (RA latex) < 14 IU/mL (0-14)

COMMENT

Result within normal limits.

Rheumatoid factor (RF) may be detected in up to 60% of patients with rheumatoid arthritis. However RF is also found in other disease states including autoimmune diseases, infective diseases and neoplasia. RF may also be detected in healthy individuals.

Anti-CCP antibody is a specific test for rheumatoid arthritis and has prognostic significance. Anti-CCP antibody testing is recommended in the diagnosis of rheumatoid arthritis.

For enquiries, contact Dr Paul Campbell 07 3121 4444
Patients should contact their referring doctor in regard to this result.
