AUTOANTIBODY SEROLOGY

Rheumatoid Factor (RA latex) < 14 IU/mL (0-14)

Anti-CCP antibody 1 U/mL (< 5)

Anti-cyclic citrullinated peptide (CCP) antibody is highly specific and moderately sensitive for the diagnosis of rheumatoid arthritis (RA). Some rheumatoid arthritis patients may be rheumatoid factor (RF) negative but may have positive anti-CCP antibodies. Anti-CCP antibody (and RF) positivity is associated with an increased risk of erosive disease in RA. The role of serial measurement of anti-CCP as a marker of disease activity in RA has not been established.
