Faeces PCR Comment :

Encephalitozoon intestinalis and Enterocytozoon bieneusi are still undergoing development and are not fully validated to current NPAAC requirements. Results should be interpreted in association with all other clinical information (clinical and laboratory) on the patient. As such these tests are not currently NATA/RCPA endorsed. Refer to Medical Testing Field Document 5.5.1.2 Subclause (iii).

The clinical significance of Blastocystis hominis infection is controversial, especially when detected by faecal multiplex polymerase chain reaction (PCR). Most of these patients do not benefit from treatment with antibiotics- consider referral to a gastroenterologist. Antibiotic treatment may be considered for symptomatic patients when other infectious and noninfectious causes have been excluded. Randomised controlled trials for treatment of Blastocystis are limited. Metronidazole, trimethoprim+sulfamethoxazole or nitazoxanide may be effective.
