Antenatal Serology

Comment on Lab ID 847795010

The NSW Public Health Act (2010) has been amended to remove the requirement for HIV serology to be requested specifically in the context of antenatal screening. In accordance with RANZCOG and RACGP recommendations, a request for antenatal serology will be regarded as a request for syphilis, rubella, hepatitis B, hepatitis C and HIV serology, in all cases.

NATA Accreditation No 2178

HIV Antigen and Antibody

HIV 1/2 Antigen and Antibody Negative

Comment on Lab ID 847795010

If serum was taken less than 3 months after exposure, this result may not exclude HIV-1/HIV-2 infection. Therefore another serum specimen should be tested after that time.

Vitamin D	116	H 203	95	H 148	nmol/L	(50-140)

Comments on Collection 07/01/21 1523:
According to the Position Statement 'Vitamin D and health in adults in Australia and New Zealand' MJA, 196(11):686-687, 2012, Vitamin D status is defined as:

Mild Deficiency	30	-	49 nmol/L
Moderate Deficiency	12.5	-	29 nmol/L
Severe Deficiency	<12.5		nmol/L

Vitamin D adequacy can be defined as a level >49 nmol/L at the end of winter - the level may need to be 10 - 20 nmol/L higher at the end of summer, to allow for seasonal decrease.
From 1st November 2014, Medicare rebates for vitamin D testing will apply to patients at risk of Vitamin D deficiency such as chronic lack of sun exposure.
