Proteinase 3 AB	<0.2	<=0.9 AbIndx	—	BER
MYELOPEROXIDASE AB	<0.2	<=0.9 AbIndx	—	BER

**Comment:**

Autoantibodies to Myeloperoxidase (MPO) are commonly associated with microscopic polyangitis (MPA), polyarteritis nodosa (PAN), Churg-Strauss Syndrome (CSS) and idiopathic crescentic glomerulonephritis (ICGN). 90% of patients with inflammatory bowel disease, autoimmune hepatitis or chronic liver disease will be negative for MPO.

Autoantibodies to Proteinase-3 (PR3) are accepted as characteristic for Wegener's granulomatosis. They are detectable in 95% of the histologically proven Wegener's granulomatosis cases.

These autoantibodies are clinically helpful in determining active versus inactive disease states, in monitoring the effect of therapy, and in evaluating the possibility of relapse.
