25-OH Vitamin D

Vitamin D 86 nmol/L (50 - 140)

Comment on Lab ID 846618206

According to the Position Statement 'Vitamin D and health in adults in Australia and New Zealand' MJA, 196(11):686-687, 2012, Vitamin D status is defined as:

Mild Deficiency	30	-	49 nmol/L
Moderate Deficiency	12.5	-	29 nmol/L
Severe Deficiency	<12.5		nmol/L

Vitamin D adequacy can be defined as a level >49 nmol/L at the end of winter - the level may need to be 10 - 20 nmol/L higher at the end of summer, to allow for seasonal decrease.

From 1st November 2014, Medicare rebates for vitamin D testing will apply to patients at risk of Vitamin D deficiency such as chronic lack of sun exposure.

Mycoplasma genitalium PCR

Mycoplasma genitalium DNA Not Detected

Comment on Lab ID 847771343

Mycoplasma genitalium is the only genital mycoplasma with evidence to support its role in urethritis, cervicitis, PID and pre-term delivery/miscarriage. Mycoplasma hominis and Ureaplasma species are genital commensals in up to 50% of sexually active asymptomatic women and their routine testing and reporting frequently leads to misdiagnosis and unnecessary treatment.

M. hominis and Ureaplasma species will no longer be reported without prior discussion with a Clinical Microbiologist.

HIV Antigen and Antibody

HIV 1/2 Antigen and Antibody Negative

Comment on Lab ID 846618206

If serum was taken less than 3 months after exposure, this result may not
exclude HIV-1/HIV-2 infection. Therefore another serum specimen should be
tested after that time.

Supervising Pathologist: IC

Hepatitis C Serology

Hepatitis C Ab (Abbott) Not Detected

Comment on Lab ID 846618206

Hepatitis C - No evidence of infection with Hepatitis C. Seroconversion is sometimes delayed and repeat testing up to 6 months post-exposure may be necessary to exclude infection.

Supervising Pathologist: IC

NATA Accreditation No 2178

Tests Completed: B12(s), Fol(s), LFT(s), C(s), UCreat(s), E(s), Glu(p),

HbA1c

Date	04/12/19	10/12/19	14/10/20	Units	Reference
Time F-Fast	1417	1244	0906 F		
Lab ID	842285548	842239637	846618206		
HbA1c (IFCC)	31	30	27	mmol/mol	(20-38)
HbA1c	5.0	4.9	4.6	%	(4.0-5.6)

Comments on Collection 14/10/20 0906 F:

HbA1c less than 48 mmol/mol (6.5%) does not exclude a diagnosis of diabetes mellitus based upon elevated glucose results. The existing diagnostic criteria for fasting and random glucose levels and for oral glucose tolerance testing remain valid, and are the diagnostic tests of choice for gestational diabetes, type 1 diabetes and in the presence of conditions that interfere with HbA1c measurement. Conditions which may affect the measured HbA1c value include any of the haemolytic anaemias, anaemia of chronic disease, severe liver disease, vitamin B12 and/or folate deficiency, the haemoglobinopathies and regular phlebotomy performed for medical indications or for blood donation.

It also should be noted that further investigation is required for any inexplicably low HbA1c level or significant discrepancy between HbA1c and glucose results.
