Vitamin D	107	101	68		nmol/L	(50-140)

Comments on Collection 02/10/20 0925 F:
According to the Position Statement 'Vitamin D and health in adults in Australia and New Zealand' MJA, 196(11):686-687, 2012, Vitamin D status is defined as:

Mild Deficiency	30	-	49 nmol/L
Moderate Deficiency	12.5	-	29 nmol/L
Severe Deficiency	<12.5		nmol/L

Vitamin D adequacy can be defined as a level >49 nmol/L at the end of winter - the level may need to be 10 - 20 nmol/L higher at the end of summer, to allow for seasonal decrease.
From 1st November 2014, Medicare rebates for vitamin D testing will apply to patients at risk of Vitamin D deficiency such as chronic lack of sun exposure.

Leucocytes +++ G+ve cocci +++ G-ve bacilli +++

Culture

No pathogens isolated after 48h incubation

Comment on Lab ID 299746287

The presence of squamous epithelial cells in this specimen suggests an upper rather than lower respiratory tract origin. The clinical significance of any bacterial isolate reported is therefore uncertain and recollection is recommended if clinically indicated.

**Exam Date: 11th December
2020**

Dear Dr Levenston

Re: **Mrs Karina HANKINSON - DOB: 23/11/1969**
Unit 1/11 Cohen Street FAIRLIGHT 2094

ULTRASOUND LEFT SHOULDER

Thank you for referring Mrs Hankinson with possible capsulitis.

The tendons of the rotator cuff are intact and are normal in appearance. The biceps tendon is intact and is in the normal position in the biceps groove.

No bursal thickening is seen and there is no ultrasound evidence of subacromial impingement on abduction.

The acromioclavicular joint appears normal.

There are no ultrasound features to suggest adhesive capsulitis.

Conclusion:

Normal study.

Dr Peter WILSON
