Dear Dr Arnold-Nott

Re: MS Brigitte Daley

Date of birth: 14-DEC-1966

Address: PO BOX 94
MILLAA MILLAA QLD 4886

BSQ Client ID: 3555860 Letter ID: L60452411

MS Daley attended a breastscreen (screening mammogram) at the BreastScreen Queensland Atherton Mobile Service on Thursday, 09 March 2023. No evidence of breast cancer was detected. MS Daley has been advised of her results.

When mammograms are read, the readers only look for signs of breast cancer and do not report on changes on the mammogram which are not considered to be a sign of breast cancer.

The recommended rescreen date for MS Daley is March, 2025. We will remind MS Daley when she is next due.

In relation to maintaining breast health between screening mammograms, MS Daley has been encouraged to be breast aware by being familiar with the normal look and feel of her breasts and to consult you if she is concerned about any changes

in her breasts.

Yours sincerely

Paul Vardon
Director, Cancer Screening
Queensland Health
BreastScreen Queensland Cairns Service

HbA1c

Date	07-Dec-17 28-May-19		Latest Results		
Time F-Fast	0808 F	0729 F	10-Aug-23		
Lab Id.	640141764	647758612	1143		
			682082830	Reference	Units
HbA1c (NGSP)	5.5	5.1	5.5	(<6.5)	%
HbA1c (IFCC)	36	32	37	(<48)	
mmol/mol					

Comments on Collection 10-Aug-23 1143:
The currently accepted cut-point for diagnosis of Type 2 Diabetes is an HbA1c level equal to or greater than 6.5% (48 mmol/mol) in patients with normal red blood cell turnover.
An abnormal screening HbA1c equal to or greater than 6.5% (48 mmol/mol) should be confirmed by a repeat HbA1c level as soon as possible, prior to any dietary adjustment or therapeutic intervention.
If the follow up HbA1c is less than 6.5% (48mmol/mol) then the patient does not have diabetes and should be rescreened in 12 months time.
(Ref: MJA 197/4:220-221 (2012))
Patients with HbA1c levels of 5.7 - 6.4% (38 - 46 mmol/mol) may still have a slightly increased risk of microvascular complications according to the AusDiab study.
The Medicare item for HbA1C for diagnosis of Diabetes Mellitus is limited to one test per 12 months; for monitoring Diabetes testing remains unchanged - 4 tests per 12 months.
Further information may be found at MBS online
<http://www9.health.gov.au/mbs/search.cfm>
An alternative test to monitor diabetes such as serum fructosamine is advisable in the presence of altered red cell lifespan.
HbA1c performed on the Sebia Cap3 analyser by capillary electrophoresis.

Comments on Collection *10-Aug-23 1143:

R-U-Alb/Creat

The Australian Diabetes Society subcommittee on microalbuminuria recommends that albumin excretion rates should be performed annually on all diabetic patients. Abnormality is confirmed if two of three samples collected over a six week period are elevated. Specimens other than first morning collections may occasionally be positive in subjects with orthostatic or exercise induced proteinuria.
