

Addressee: DR NEELS MYBURGH

Referred by: NEELS DR MYBURGH

Name of Test: Pelvic Ultrasound

Requested: 09/03/2022

Collected: 11/03/2022

Reported: 11/03/2022 11:03

Apollo RIS Patient Id : SKG1608251

Patient Name : HARRINGTON TRACY **DOB :** 02/11/1965 **Service Date :** 11/03/2022

PELVIC ULTRASOUND

Clinical History: Pelvic pain. Has a history of polyps.

Findings: A transabdominal and transvaginal ultrasound was performed. The uterus is anteverted. It is of normal size measuring 66 x 30 x 43mm. The myometrium is heterogeneous in echotexture. No obvious focal mass is seen. The endometrium measures 1mm. The polyp previously shown is not shown on today's examination. The ovaries appear small in size in keeping with the patient's age. The right ovary measures 14 x 10 x 19mm giving a volume of 1.3ml. There is tenderness to probe pressure. The left ovary measures 9 x 25 x 10mm giving a volume of 1.1ml with tenderness to probe pressure.

A trace of fluid is seen in the region of the fundus of the uterus.

There is no movement of the uterus and ovaries with probe pressure during the transvaginal ultrasound with tenderness. There may be adhesions.

The appendix is not identified.

There are no abnormal lymph nodes seen in the right iliac fossa.

Comment: There is no obvious focal abnormality seen in the pelvis there is however tenderness to probe pressure.

Thank you for your referral.

Yours sincerely,

Dr Paul Van Zyl - SKG Radiology

(Sonographer: J Lau)
