Phone: 95862252

Birthdate: 02/11/1965 Sex: F Medicare Number: 6159026946

Your Reference: Lab Reference: 22-81076220-FNA-0

Laboratory: WESTERN DIAGNOSTIC PATHOLOGY

Addressee: DR NEELS C MYBURGH Referred by: DR MAYUR C PANKHANIA

Copy to:

DR COLIN A SHERRINGTON  
TO BE CONFIRMED

Name of Test: FINE NEEDLE ASPIRATE (FNA-0)

Requested: 15/11/2022 Collected: 15/11/2022 Reported: 21/11/2022 14:37

#### FINE NEEDLE ASPIRATION CYTOLOGY

##### CLINICAL:

1. Left thyroid interpolar nodule cytology.
2. Left thyroid lower pole nodule cytology.

##### PROCEDURE:

1. FNA left thyroid interpolar nodule: 5 smears and 1 RPMI sample received. 1 cell block prepared.
2. FNA left thyroid lower pole nodule: 6 smears and 1 RPMI sample received. 1 cell block prepared.

##### MICROSCOPIC:

1. FNA left thyroid interpolar nodule is of low to moderate cellularity, and shows follicular cells occurring as small sheets and clusters. The background contains relatively abundant thin colloid and scant thick colloid admixed with blood. There are no features of papillary thyroid carcinoma. No malignant cells identified. The cell block contains a few small clumps of colloid and scant follicular cells.

2. FNA left thyroid lower pole nodule is of low cellularity, containing follicular cells occurring as small sheets and clusters. Also present are scattered haemosiderin-laden macrophages and giant multinucleated histiocytes. The background contains relatively abundant thin colloid and scant thick colloid admixed with blood. There are no features of papillary thyroid carcinoma. No malignant cells identified. The cell block contains a few groups of follicular cells and many haemosiderin-laden macrophages.

##### CONCLUSION:

1. FNA left thyroid interpolar nodule: BENIGN; Colloid nodule.
2. FNA left thyroid lower pole nodule: BENIGN; Colloid nodule with cystic change.
