Dear Dr Jayaveera

RE: MR ROMEN SAVESK - DOB: 06/01/87
UNIT 6/114 BARR SMITH AVENUE BONYTHON ACT 2905

Thank you for seeing Romen (Ro). He is a 36-year-old gentleman with a complex history. He had COVID-19-related myopericarditis. Cardiac MRI showed small pericardial effusion. There was no myocardial fibrosis, infiltration or myocardial infarction on cardiac MRI. He initially came in to see me back in June 2023 for assessment and management of ongoing atypical chest pain and palpitations since his COVID 19 vaccination back in September 2021. He had the first dose of Pfizer vaccine on 18th of September 2021, which was complicated by disabling atypical chest pain, palpitation, shortness of breath and disabling generalised fatigue and tiredness, insomnia and skin rash and it also affected his memory. He was seen by neurologist, dermatologist and was referred to long COVID clinic in St Vincent's Hospital. He was recently been seen by a neurologist in Sydney for COVID vaccine-related probable neurological side effects. He is also suffering from chronic fatigue syndrome since 2006 (fully recovered).

As discussed over the phone, he is on low-dose colchicine currently, previously treated with weaning dose of prednisolone.

Thank you once again for seeing this gentleman as soon as possible and please feel free to contact me if you have any further questions.

Kind regards

Dr Ahmed Khan
Consultant Interventional Cardiologist
MBBS FRACP FCSANZ FESC
