Sydney North Neurology and Neurophysiology

Consultations, Nerve Conduction/EMG, EEG and Botulinum toxin

2 November 2023

To Whom It May Concern
c/- Mr Romen Savesk

Sir/Madam,

RE: Romen Savesk
DOB: 6/1/1987

I write as Romen's current treating neurologist. I consulted with Romen for the first time on November 2, 2023.

It is clear that Romen has a multisystem condition, probably related convincingly to treatment with the mRNA-based COVID vaccination back in 2021.

It has been unrecognised, in my opinion, for the intervening period that he has sustained severe chronic migraine as an integral part of that multisystemic condition.

For Romen, chronic migraine is a neurological condition that causes significant difficulties with cognition, balance, and movement, in addition to the more recognisable aspects for many practitioners and people, which include severe recurrent headaches on the background of an unrelenting chronic headache as well as profound light and sound sensitivity.

I have commenced Romen on a treatment regimen that I hope will improve his situation, but it will likely take several months for him to improve back to anything approaching his premorbid level, at least with respect to his chronic migraine, assuming the regimen trialled is effective.

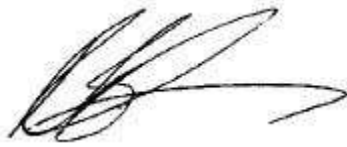

I write to request that he be afforded compassionate leave based upon his diagnosis of chronic migraine. Not doing so would place his recovery at significant risk and would place him in a great degree of peril, both financially and health-wise.

I request that, in consultation with Romen, adjustments to workplace duties and leave provisions are made as necessary to aid him in a recovery that I anticipate will occur - but will take at least several months.

Please do not hesitate to contact me if there are any concerns.

With kind regards,

Yours sincerely,
