**Streptococcal Serology**

Anti-Streptolysin O (ASO)	<b>91</b>	IU/mL	(<128)
Anti-DNase B	<b>147</b>	U/mL	(<250)

**Comment**

Reference ranges for Anti-DNaseB are age dependent:

0 - 4 yrs	<366 U/mL
5 - 14 yrs	<500 U/mL
15 - 24 yrs	<473 U/mL
25 - 34 yrs	<390 U/mL
35 yrs or older	<265 U/mL

Please note: Anti-DNaseB testing is performed at Sullivan Nicolaides Pathology.

Streptococcal serology is not recommended for investigation of acute sore throat. It may assist in the diagnosis of non-suppurative post-streptococcal sequelae eg acute rheumatic fever and post-streptococcal glomerulonephritis.

ASO titre tends to rise a week following infection, peaking at 3-5 weeks and declines after 8 weeks and responds to pharyngeal infection more vigorously than skin infection. Anti-DNaseB titre rises more slowly and peaks at 6-8 weeks and declines after 12 weeks but responds equally strongly to both pharyngeal and skin infections.

Tests Completed: IgA(s), IgG(s), IgE(s), D1, E1R, E5, GX2, DNaseB(s), ASOT(s). **FINAL REPORT**

Clinical Notes: PATIENT REQUEST
